

## **ABSTRACT**

*The futsal dribbling ability of class X-C Bina Muda Cicalengka Highschool for the 2022/2023 Academic Year is still not good enough and tends to be monotonous. This is also evidenced by the average value under the Minimum Completion Criteria of 75 or less than 75% not achieving the Minimum Completion Criteria. This research is to find out the learning outcomes of futsal dribbling through the application of the cooperative learning model type team game tournaments. This research method is Class Action Research. Classroom Action Research is a type of research that describes both the process and the results, which carry out the class action research process in its class to improve the quality of its learning. In accordance with the results of the reflections carried out by researchers and observers in cycle I, and the research was carried out in cycle II with a changed strategy according to the results of reflection on actions in cycle I, an overall average value of 79.63 was obtained which was divided into two aspects of assessment, namely cognitive aspects and psychomotor aspects. Classroom Action Research conducted at Bina Muda Cicalengka Highschool on the Physical Education learning process with futsal dribbling material by applying the cooperative learning type team game tournament model has positive benefits and impacts for the development of the learning process, especially in the Physical Education learning process at Bina Muda Cicalengka Highschool*
