The study aims to determine the impact of government spending, foreign investment, and labour on Indonesian economic growth in 2000-2022. By analyzing how the influence of labour with government expenditure as a partial moderation variable on economic development in Indonesia during 2000-2022 was. This study used secondary data with a dual moderation linear analysis. The results of this study show that government expenditure has a significant negative impact, labour force a significant positive impact while foreign investment has a positive link but no significant impact on Indonesian economic growth in 2000-2022. Government spending has managed to strengthen the labour force to give a positive and significant influence on the growth of Indonesia's economy in 2000 - 2022.
