This study aims to analyze the effect of education level, population growth rate, investment and economic growth rate partially and together on per capita income in West Java Province in 2010-2022. The analysis method used is multiple linear regression analysis using Eviews12 software. The study uses a quantitative descriptive method with time series data type. The results of this study indicate that partially the investment variable has a significant positive effect, while the population growth rate has a significant negative effect, then the education level and economic growth rate have a positive but insignificant effect on per capita income in West Java Province in 2010-2022. Together the variables of education level, population growth rate, investment and economic growth rate have a significant effect on per capita income in West Java Province in 2010-2022.

Keywords : Education level, population growth rate, investment, economic growth rate, GRDP per capita
