This study aims to analyze the effect of inflation, BI rate, money supply, and exchange rate on gross domestic product of the financial services sector. This study analyzes (a) how inflation, BI rate, money supply, and partial exchange rate affect the GDP of the financial services sector in Indonesia in 2006-2022 and (b) how inflation, BI rate, money supply, and exchange rate together affect the GDP of the financial services sector in Indonesia in 2006-2022. The analysis method used is multiple linear regression analysis using Eviews 12 software. The test uses t-statistical test and F-statistical test. The results of this study show that the money supply and exchange rate have a significant positive effect on the GDP of the financial services sector. The inflation variable and BI rate do not have a significant effect on the GDP of the financial services sector
