

ABSTRACT

Rizkia Zakia Septiani. 2024. THE INFLUENCE OF FAMILY SUPPORT ON ELDERLY PARTICIPATION IN TERATAI POSYANDU ACTIVITIES, GUNUNGRASA VILLAGE. Department of Community Education. Faculty and Education Sciences. Siliwangi University

Family support is an attitude, action from the family towards family members in the form of informational support, assessment or appreciation support, instrumental support, and emotional support. This study aims to determine the effect of family support on elderly participation in lotus posyandu activities in Gununggrasa hamlet. The research method used is simple linear regression with a quantitative approach. The sampling technique used was a simple random sampling technique where samples were taken randomly with a sample size of 33 respondents. The results of the hypothesis test show that the calculated t value for the family support variable has a value of 6,497 > the table value of 1,695. Meanwhile, the probability value is $0.000 < 0.05$ or 5%. So it can be concluded that H_0 is rejected and H_1 is accepted. The regression coefficient for the independent variable is 0.301, which states that every time you add 1% to the value of the independent variable, the value of the dependent variable increases by 0.301. The regression coefficient is positive, which means that the direction of the influence of the independent variable on the dependent variable is positive. Then the results of the R-square determination show that family support has an effect of 55.7% on elderly participation. Thus, based on the results of the analysis, it can be concluded that family support influences the participation of elderly people in organized posyandu activities in Gununggrasa hamlet.
