ABSTRACT

*DILA ARSITA. 2024. **ANALYSIS OF ENVIRONMENTAL LITERACY AND ENVIRONMENTAL CARE ATTITUDES OF STUDENTS OF SMA NEGERI 2 TASIKMALAYA.** Department of Biology Education, Faculty of Teacher Training and Education, Siliwangi University, Tasikmalaya.*

The purpose of this study is to analyze environmental literacy and environmental care attitudes of students of SMA Negeri 2 Tasikmalaya. This research was carried out from January to May 2024. The research method used is qualitative through a descriptive approach. The sampling techniques used are *Purposive Sampling* as many as 60 students in grades X and XI based on inclusion criteria. The data analysis used through the Miles and Huberman model consists of *reduction, data display,* and *conclusion drawing/verification*. The results of the study show that students' environmental literacy on cognitive indicators has an average of 14.35 which is in the low category which means that students are less interested in environmental issues and do not have the right action strategies to solve environmental problems, then the affective indicators have an average of 57.13 in the high category which means that students have awareness and sensitivity to the environment, Then the indicator *behavior* has an average of 33.86 in the medium category, which means that students have environmental action skills strategies. Students' attitude of caring for the environment is in the medium category with an average of 65.85 which means that students understand responsibility for the environment. Thus, it can be concluded that the students of SMA Negeri 2 Tasikmalaya are environmentally literate and have an attitude of caring for the environment.

Keywords*: Environmental Literacy; Environmental Care Attitude; Environmental Damage*
