ABSTRACT

TENI ROSMALIA. 2024. COMMUNITY PARTICIPATION IN THE POSYANDU NUSA INDAH PROGRAM, PANGADEGAN VILLAGE, CIBEUREUM DISTRICT, TASIKMALAYA CITY. Department of Community Education, Faculty of Teacher Training and Education, Siliwangi University Tasikmalaya.

In each program, participation from the community is needed so that a program success can be achieved. The Nusa Indah Posyandu program is a public health service program, especially for the health of toddlers who urgently need participation from the community so that the program can run according to its goals and it is hoped that the posyandu program can overcome problems in the health of every toddler and provide the fulfillment of health services to toddlers. The purpose of this study is to determine the participation of the community in the posyandu program in improving the health of toddlers. The method used in this study is qualitative with a descriptive approach. The data collection techniques in this study are through observation, interviews, and documentation. The results of the study show that there is community participation in the form of thoughts, energy and money for the Nusa Indah posyandu program in improving the health of toddlers. The conclusion in this study is that community participation in the posyandu program in improving the health of toddlers in all forms of participation already exists, but community participation in the form of materials does not exist because the facilities available at the posyandu are complete and adequate in supporting the needs of the posyandu program.
