Grape farming is an agricultural activity with high economic value. This study aims to (1) identify the implementation of Standard Operating Procedures (SOP) in grape farming, and (2) analyze the contribution of grape farming to farmers' income. The research was conducted at the Mekar Bayu Youth Farmers Group in Ciganjeng Village in February 2024. The research methodology employed a survey method, with respondents determined through a census of 30 grape farmers. The data on the level of SOP implementation in grape farming were analyzed descriptively and quantitatively, while the contribution of grape farming was analyzed using farm business analysis tools. The results showed that the level of SOP implementation in grape farming falls into the optimal category, achieving a score of 80,29 percent. The contribution of grape farming to farmers' income falls into the low category, with a score of 30 percent. On average, the contribution of grape farming to household income was Rp14.912,071 per year.

Keywords : SOP in Grape Farming, Contribution of Grape Farming
