The purpose of this research was to know and analyze the factors that influence the share prices of BUMN Banks listed on the BEI through Company Efficiency (BOPO) and Dividend Per Share (DPS). The research method used is the analytic survey method. The analytical method used in Linier Panel Data Regression and Coefficient of Determination.

Based on the results of the study, noted that partially Company Efficiency (BOPO) has no significant impact on share prices. While Dividend Per Share (DPS) has a significant impact on share prices. For simultaneous testing it can be concluded that Company Efficiency (BOPO) and Dividend Per Share (DPS) have a significant impact on share prices of BUMN Banks.

Keywords: Company Efficiency (BOPO), Dividend Per Share (DPS), Share Prices.
