### **Hubungan Pengetahuan, Sikap dan Dukungan Pengurus Pesantren dengan Perilaku Pencegahan Covid-19 di Pesantren**

(Studi Pada Santri SMA Pondok Pesantren Persatuan Islam 67 Benda Kota Tasikmalaya Tahun 2021)

Wilayah dengan mobilitas tinggi dalam lingkup yang kecil seperti pesantren memerlukan kewaspadaan tinggi untuk mencegah kemungkinan penyebaran Covid-19. Penelitian ini ditujukan untuk mengetahui hubungan antara pengetahuan, sikap dan dukungan pengurus pesantren dengan perilaku pencegahan Covid-19 di Pondok Pesantren Persatuan Islam 67 Benda Kota Tasikmalaya. Jenis penelitian ini berupa penelitian kuantitatif dengan desain deskriptif korelasi melalui pendekatan *cross sectional*. Penelitian ini melibatkan populasi santri SMA kelas XI-XII sebanyak 266 santri dengan sampel berjumlah 157 santri. Teknik sampling yang digunakan pada penelitian ini adalah *probability sampling*, sampel diambil dari setiap kelas dengan teknik *proportional random sampling*. Analisis bivariat menggunakan uji statistik *chi square* pada derajat kepercayaan ( $\alpha$ ) = 0,05 atau 95% dan menunjukkan bahwa terdapat hubungan antara pengetahuan dengan perilaku pencegahan Covid-19 ( $p\text{-value} = 0,002 < 0,05$ ), terdapat hubungan antara sikap, dan dukungan pengurus pesantren dengan perilaku pencegahan Covid-19 di pesantren ( $p\text{-value} = 0,000 < 0,05$ ). Pemberian edukasi disertai praktek dengan disertai pengawasan dan peraturan yang ketat, akan meningkatkan rutinitas positif dalam melaksanakan protokol kesehatan.

**Relationship between Knowledge, Attitude and Support of Islamic Boarding School Management with Covid-19 Prevention Behavior in Islamic Boarding Schools**

(Study on Students of SMA Pondok Pesantren Islamic Association of 67 Benda in Tasikmalaya City in 2021)

Areas with high mobility in a small scope such as Islamic boarding schools require high vigilance to prevent the possible spread of Covid-19. This study aimed to determine the relationship between the knowledge, attitudes and support of Islamic boarding school administrators with Covid-19 prevention behavior at the Islamic Unity Islamic Boarding School 67 Benda, Tasikmalaya City. This type of research is a quantitative research with a descriptive correlation design through a cross sectional approach. This study involved a population of high school students in class XI-XII as many as 266 students with a sample of 157 students. The sampling technique used in this study is probability sampling, the sample is taken from each class by proportional random sampling technique. Bivariate analysis using the chi square statistical test at the degree of confidence ( $\alpha$ ) = 0.05 or 95% and shows that there is a relationship between knowledge and Covid-19 prevention behavior ( $p$ -value = 0.002 < 0.05), there is a relationship between attitudes, and the support of pesantren administrators with Covid-19 prevention behavior in pesantren ( $p$ -value = 0.000 < 0.05). The provision of education accompanied by practice accompanied by strict supervision and regulations will increase positive routines in implementing health protocols.
