

## ABSTRAK

RATIH LESTARI SUHERMAN 2022. **Hubungan antara Sikap Peduli Lingkungan dan Perilaku Hidup Sehat dengan Hasil Belajar Peserta Didik pada Materi Perubahan Lingkungan (Studi Korelasi di Kelas X MIPA MA Al-Fadllyyah Bojonggambir Tahun Ajaran 2021/2022)**. Skripsi Jurusan Pendidikan Biologi, Fakultas Keguruan dan Ilmu Pendidikan Universitas Siliwangi.

Manusia akan selalu berhubungan dengan lingkungannya baik lingkungan sosial maupun tempat dimana manusia itu tinggal. Sikap peduli terhadap lingkungan dan kesehatan harus ditanamkan sejak dini, sehingga manusia akan senantiasa terus menjaga lingkungan dan peduli terhadap kesehatan dirinya. Penelitian ini bertujuan untuk mengetahui korelasi antara sikap peduli lingkungan dan perilaku hidup sehat dengan hasil belajar peserta didik pada materi perubahan lingkungan tahun ajaran 2021/2022. Metode penelitian yang digunakan adalah korelasional dengan populasi yaitu seluruh kelas X MIPA MA Al-Fadllyyah Bojonggambir Tahun Ajaran 2021/2022 sebanyak 1 kelas dengan jumlah 21 peserta didik. Sampel sebanyak satu kelas diambil dengan teknik sampling jenuh karena seluruh populasi dijadikan sampel. Instrumen penelitian yang digunakan berupa angket sikap peduli lingkungan sebanyak 25 pernyataan, angket perilaku hidup sehat sebanyak 28 pernyataan dan soal test hasil belajar sebanyak 30 soal. Teknik analisis data dilakukan dengan uji prasyarat analisis dan uji hipotesis. Uji hipotesis menggunakan uji korelasi *product moment pearson*. Hasil penelitian menunjukkan bahwa: (i) ada korelasi antara sikap peduli lingkungan dengan hasil belajar peserta didik dalam kategori cukup. (ii) Ada korelasi antara perilaku hidup sehat dengan hasil belajar peserta didik dalam kategori cukup. (iii) Ada korelasi sikap peduli lingkungan dan perilaku hidup sehat dengan hasil belajar peserta didik dalam kategori sedang. Berdasarkan hasil penelitian dapat disimpulkan bahwa ada korelasi antara sikap peduli lingkungan dan perilaku hidup sehat dengan hasil belajar peserta didik pada materi perubahan lingkungan di Kelas X MIPA MA Al-Fadllyyah Bojonggambir Tahun Ajaran 2021/2022.

## ABSTRACT

RATIH LESTARI SUHERMAN 2022. **The Relation Between Environmental Care Attitudes and Healthy Living Behaviors with Student Outcomes on Environmental Change Material ( Correlation Study in Class X MIPA MA Al-Fadllyah Bojunggambir Academic Year 2021/2022).** Thesis of Department of Biology Education, Siliwangi University.

*Man will always be in contact with his environment both the social environment and the place where the human being lives. An attitude of caring for the environment and health must be instilled from an early age, so that humans will always continue to protect the environment and care about their own health. This study aims to determine the correlation between environmental care attitudes and healthy living behaviors with student learning outcomes in the material on environmental changes for the 2021/2022 school year. The research method used is correlational with the population, namely all classes X MIPA MA Al-Fadllyah Bojunggambir for the 2021/2022 Academic Year as many as 1 class with a total of 21 students. One class of samples was taken using a saturated sampling technique because the entire population was sampled. The research instruments used were in the form of 25 environmental care attitude questionnaires, 28 healthy living behavior questionnaires and 30 learning outcomes test questions. Data analysis techniques are carried out with analysis prerequisite tests and hypothesis tests. Test the hypothesis using pearson's product moment correlation test. The results showed that: (i) there is a correlation between environmental care attitudes and student learning outcomes in the sufficient category. (ii) There is a correlation between healthy living behaviors and the learning outcomes of learners in the sufficient category. (iii) There is a correlation of environmental care attitudes and healthy living behaviors with the learning outcomes of learners in the moderate category. Based on the results of the study, it can be concluded that there is a correlation between environmental care attitudes and healthy living behaviors with student learning outcomes on environmental change material in Class X MIPA MA Al-Fadllyah Bojunggambir Academic Year 2021/2022.*
