

ABSTRAK

ELVIRA SAFITRI, 2023. **ANALISIS KETERLIBATAN DAN RESPON PEMBELAJARAN PESERTA DIDIK PADA MATERI SISTEM REPRODUKSI MANUSIA DI MASA NORMALISASI PANDEMI COVID-19 DI SMA NEGERI 6 TASIKMALAYA** (Studi Analisis di Kelas XI MIPA SMA Negeri 6 Tasikmalaya). Skripsi. Jurusan Pendidikan Biologi Fakultas Keguruan dan Ilmu Pendidikan, Universitas Siliwangi, Tasikmalaya.

Penelitian bertujuan untuk menganalisis dan mendeskripsikan keterlibatan dan respon peserta didik pada materi sistem reproduksi manusia di masa normalisasi pandemi Covid-19. Penelitian ini dilakukan pada bulan Januari 2022 sampai Maret 2023. Penelitian ini menggunakan metode kualitatif dengan pendekatan deskriptif. Teknik pengambilan sampel yang digunakan adalah *purposive sampling* sebanyak 32 orang. Instrumen penelitian ini yaitu menggunakan angket keterlibatan peserta didik hasil adaptasi dari Reeve & Tseng (2011) sebanyak 17 pernyataan, angket respon hasil adaptasi dari Zainuddin (2020) sebanyak 18 pernyataan, wawancara semi terstruktur kepada peserta didik dan guru, serta observasi partisipatif di kelas XI MIPA 1 SMA Negeri 6 Tasikmalaya. Analisis data yang digunakan yakni model Miles dan Huberman yang terdiri dari *data reduction*, *data display*, dan *conclusion drawing/verification*. Hasil penelitian menunjukkan bahwa keterlibatan peserta didik pada materi sistem reproduksi manusia berada pada kategori kuat dengan persentase 77% dan respon peserta didik pada materi sistem reproduksi manusia berada pada kategori kuat dengan persentase 75%. Dengan demikian pelaksanaan pembelajaran di masa normalisasi pandemi Covid-19 ini mendapat keterlibatan yang tinggi serta respon yang positif dari peserta didik karena partisipasi peserta didik yang cukup tinggi dalam bertanya, menjawab pertanyaan guru, aktif di kelas dan berbagai sikap positif lainnya. Adapun untuk saran kepada peneliti selanjutnya yaitu diharapkan dapat meneliti keterlibatan dan respon peserta didik dari aspek yang lain dan lebih mendalam.

Kata kunci: Keterlibatan, Respon, dan Normalisasi Pandemi Covid-19

ABSTRACT

ELVIRA SAFITRI, 2023. ANALYSIS OF STUDENTS' ENGAGEMENT AND LEARNING RESPONSES ON HUMAN REPRODUCTIVE SYSTEM MATERIALS IN THE NORMALIZATION OF THE COVID-19 PANDEMI AT SMA NEGERI 6 TASIKMALAYA. Thesis. Departement of Biology Education, Faculty of Teacher Training and Education. Siliwangi University, Tasikmalaya.

The research aims to analyze and describe the involvement and response of students in the material of the human reproductive system during the normalization of the Covid-19 pandemic. This research was conducted from January 2022 to March 2023. This research used a qualitative method with a descriptive approach. The sampling technique used was purposive side as many as 32 people. The instrument of this research was using a questionnaire adapted from Reeve & Tseng (2011) with 17 statements, a response questionnaire adapted from Zainuddin (2020) with 18 statements, semi-structured interviews with students and teachers, as well as participatory observation in class XI. MIPA 1 SMA Negeri 6 Tasikmalaya. The data analysis used is the Miles and Huberman model which consists of data reduction, data display, and conclusion drawing/verification. The results showed that students' involvement in the human reproductive system material was in the strong category with a percentage of 77% and students' responses to the human reproductive system material were in the strong category with a percentage of 75%. Thus the implementation of learning during the normalization period of the Covid-19 pandemic received high involvement and a positive response from students because the students' participation was quite high in asking questions, answering teacher questions, being active in class and various other positive attitudes. As for suggestions to further researchers, it is hoped that they can examine the involvement and responses of students from other and more in-depth aspects.

Keywords: Engagement, Response, and Normalization of the Covid-19 Pandemic
