

ABSTRAK

Penelitian ini bertujuan untuk mengetahui adanya pengaruh pengawasan dari masyarakat terhadap efektivitas penggunaan dana desa di Desa Cineam Kecamatan Cineam Kabupaten Tasikmalaya. Penelitian ini merupakan penelitian survey dengan pendekatan kuantitatif. Instrumen penelitian berupa angket yang disebar kepada 98 responden yang mewakili penduduk di desa Cineam Kecamatan Cineam Kabupaten Tasikmalaya dalam usia produktif (17 – 65 tahun). Pengolahan data menggunakan analisis regresi linier sederhana, dikarenakan hanya terdapat satu variabel bebas.

Berdasarkan hasil observasi dan hasil penyebaran angket terhadap 98 responden, penulis mendapatkan kesimpulan bahwa pengawasan oleh masyarakat Desa Cineam terhadap penggunaan dana desa khususnya di bidang infrastruktur sudah dalam kriteria baik, namun masih terdapat kekurangan dimana masyarakat kurang diikutsertakan dalam pemeriksaan hasil kegiatan, dan pihak desa atau kecamatan jarang melakukan kunjungan secara berkala terhadap pelaksanaan kegiatan. Sedangkan efektivitas penggunaan dana desa di bidang infrastruktur mencapai kategori sedang, namun masih perlu diperbaiki pada aspek masyarakat harus sepenuhnya dilibatkan pada pemilihan bahan dan pelaksanaan pembangunan infrastruktur. Hasil olah data menunjukkan bahwa pengawasan oleh masyarakat mempengaruhi efektivitas penggunaan dana desa dengan kontribusi sebesar 42,1% dan sisanya yaitu 57,9% dipengaruhi variabel lain.

Kata Kunci: Pengawasan, Efektivitas, Dana Desa

ABSTRACT

This study aims to determine the influence of supervision from the community on the effectiveness of the use of village funds in Cineam Village, Cineam District, Tasikmalaya Regency. This research is a survey research with a quantitative approach. The research instrument was a questionnaire distributed to 98 respondents representing residents in the village of Cineam, Cineam District, Tasikmalaya Regency who were of productive age (17 – 65 years)). Data processing used simple linear regression analysis, because there was only one independent variable.

Based on the results of observations and the results of distributing questionnaires to 98 respondents, the authors conclude that the supervision by the Cineam Village community on the use of village funds, especially in the infrastructure sector, is in good criteria, but there are still deficiencies where the community is less involved in examining the results of activities, and the village or sub-districts rarely make regular visits to the implementation of activities. While the effectiveness of the use of village funds in the infrastructure sector has reached the moderate category, it still needs to be improved on the aspect that the community must be fully involved in the selection of materials and the implementation of infrastructure development. The results of data processing show that supervision by the community affects the effectiveness of using village funds with a contribution of 42.1% and the remaining 57.9% is influenced by other variables.
