The objective of this study is to examine the effects of the Human Development Index, the BI Rate, and Large and Medium Industries on the economic growth rate in West Java Province during the period 2010–2023. This study employs the Ordinary Least Squares (OLS) method with a multiple linear regression model, and the data are processed using EViews 12 software. The results indicate that the Human Development Index has a negative and significant effect on the economic growth rate. The BI Rate has a negative but insignificant effect on the economic growth rate. Large and Medium Industries have a positive and significant effect on the economic growth rate. It can be concluded that the Human Development Index, the BI Rate, and Large and Medium Industries jointly have a significant effect on the economic growth rate in West Java Province.
