This study aims to analyze the implementation of the Adiwiyata School Program in supporting the Strengthening Project of the Pancasila Student Profile (P5), with a focus on enhancing students' sustainability awareness and environmentally conscious behavior. The Adiwiyata Program is a participatory environmental education initiative designed to instill environmentally friendly habits in schools. Its integration with P5, particularly under the theme of Sustainable Lifestyle, is expected to strengthen students' environmentally aware character in alignment with Pancasila values. This research employed a descriptive qualitative approach, with data collected through in-depth interviews, observations, and documentation. The study was conducted in two schools: MTs Cijangkar and SMPN 2 Kota Tasikmalaya, both of which have implemented the Adiwiyata Program and the P5 curriculum. The results show that although both schools have adequately implemented the Adiwiyata Program, there are still challenges such as students' lack of awareness regarding waste management and understanding of sustainability concepts. However, the integration of the Adiwiyata Program with P5 has proven effective in fostering environmentally responsible behavior, increasing active student participation, and reinforcing the values of mutual cooperation and responsibility. Thematic projects carried out within the P5 framework successfully internalized ecological awareness and pro-environmental attitudes in students' daily lives. The study recommends enhancing teacher training and developing supportive infrastructure to optimize and sustain program implementation.
