This study aims to determine the effect of higher education, high-technology exports, and economic growth rates on per capita income in ASEAN countries at 2019-2023. This study uses a quantitative method with a descriptive analysis approach, as well as a panel data method processed using E-Views 12. This study is a time series from 2019-2023 and a cross-section of ASEAN countries. The research data is sourced from the World Bank and has research results with a Fixed Effect Model which shows that partially, higher education has a negative and insignificant effect, high-technology exports have a positive and significant effect, and economic growth rate has a positive but insignificant effect on per capita income. Together, higher education, high-technology exports, and economic growth rate have a significant effect on per capita income in ASEAN countries from 2019 to 2023.

Keywords: Higher Education, High-Technology Exports, Economic Growth Rate, and Per Capita Income
