

ABSTRACT

MUHAMMAD RIAN FIRMANSYAH. 2026. *Efforts to Improve Lay-Up Shoot Learning Outcomes Through the Application of the Group Investigation Type Cooperative Model for Class VIII B Students at SMPN 5 Tasikmalaya..* Jurusan Pendidikan Jasmani. Fakultas Keguruan dan Ilmu Pendidikan. Universitas Siliwangi.

The purpose of this research is to determine whether there is an improvement in lay-up shoot learning outcomes in basketball games through the cooperative model of group investigation type among students of class VIII B at SMPN 5 Tasikmalaya. This research employs a Classroom Action Research (PTK) model conducted in 2 cycles. The research subjects are the students of class VIII B at SMPN 5 Tasikmalaya, totaling 35 students, consisting of 17 males and 18 females. The object of this research is the learning process of lay-up shoot in basketball games through the cooperative model of group investigation type. The research instruments apply observation tests and performance tests using assessment rubrics contained in the Teaching Module, intended to determine process scores. The research results show an improvement in lay-up shoot learning outcomes in basketball games through the cooperative model of group investigation type among students of class VIII B at SMPN 5 Tasikmalaya. After implementing the group investigation cooperative model on students of class VIII B in 2 cycles, the results reached 80.7, exceeding the Learning Objective Completion Criteria (KKTP) of 76. It can be concluded that the learning process through the cooperative model of group investigation type has proven to improve the learning outcomes of the basic lay-up shoot technique in basketball for class VIII B at SMPN 5 Tasikmalaya.
